

CLAIMS

What is claimed is:

1. A method for concentrating vermicompost comprising the steps of
 - a. liquefying and agitating a vermicompost feedstock;
 - b. separating large bodies from the liquefied feedstock and further separating the remaining portion into first and second sub-portions;
 - c. centrifugally separating the first sub-portion into light and heavy portions;
 - d. returning the light portion to the liquefying and agitating step;
 - e. separating biological vermicompost components from the second sub-portion and heavy portion using a biological filter;
 - f. returning the liquid to the liquefying and agitating step;
 - g. innoculating the biological vermicompost components with food and/or supplements;
 - h. further enhancing the concentration of the biological vermicompost components by allowing the biological vermicompost components an effective amount of time to multiply and dry; and
 - i. packaging the biological vermicompost components.
